

Cogar Manufacturing

Cogar Underground Feeder-Breaker

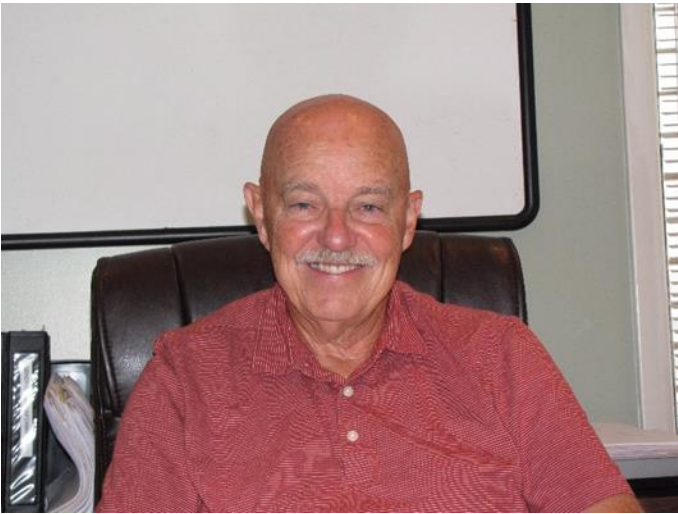

Cogar Manufacturing was established in 1979 and has grown throughout the years thanks to the dedication of its employees and the help of its customers. The company is based on a simple premise: listen to the people who run and maintain the machines, give them what they ask for, and provide the best customer service in the industry.

With over 100 years of combined experience manufacturing new equipment and rebuilding existing equipment, the company creates machines that set new standards and that allow customers to perform better and exceed their expectations.

Cogar Manufacturing started primarily rebuilding equipment, but as it grew it developed into a manufacturing company building feeders, feeder breakers, belt drives, crushers, bunkers, and chain conveyor products. Units for the underground coal industry are capable of running 1,500-2,000 tons per hour.

With two facilities just outside Beckley, WV, Cogar Manufacturing main plant is at Glen White, with offices, warehouse and parts sales. The facility at Bolt, WV, houses a burning center and is where the manufacture of frames and products is carried out, and the assembly of the feeder breakers is done. ElectroQuip is a subsidiary and has been working with a number of different manufacturers in the development of VFD drives. ElectroQuip also does repair of electronic equipment for underground mines.
